RareTech Testing :

Dashboard -> total projects -> view project-> edit project :
-there is no notification got to the one assogned supervisor after edited date
- same there is no message notification after the the project cancelled from admin
-- still there is no notification after the admin assigned supervisor
-cant active the project after cancelled ;

Project testing issues:
-task end date lasting more than finished date

-category disable option
-- Inactive categories showing in project active categories

- After add new document the green message "previous version updated succesfully doesnt hide automatically "

- if the project is cancelled still there is edit button still functioning

- when the project is cancelled from admin ,there is no notification senting to supervisor who lead that project ,

-also when admin assign supervisor still there is no notification supervisor got.

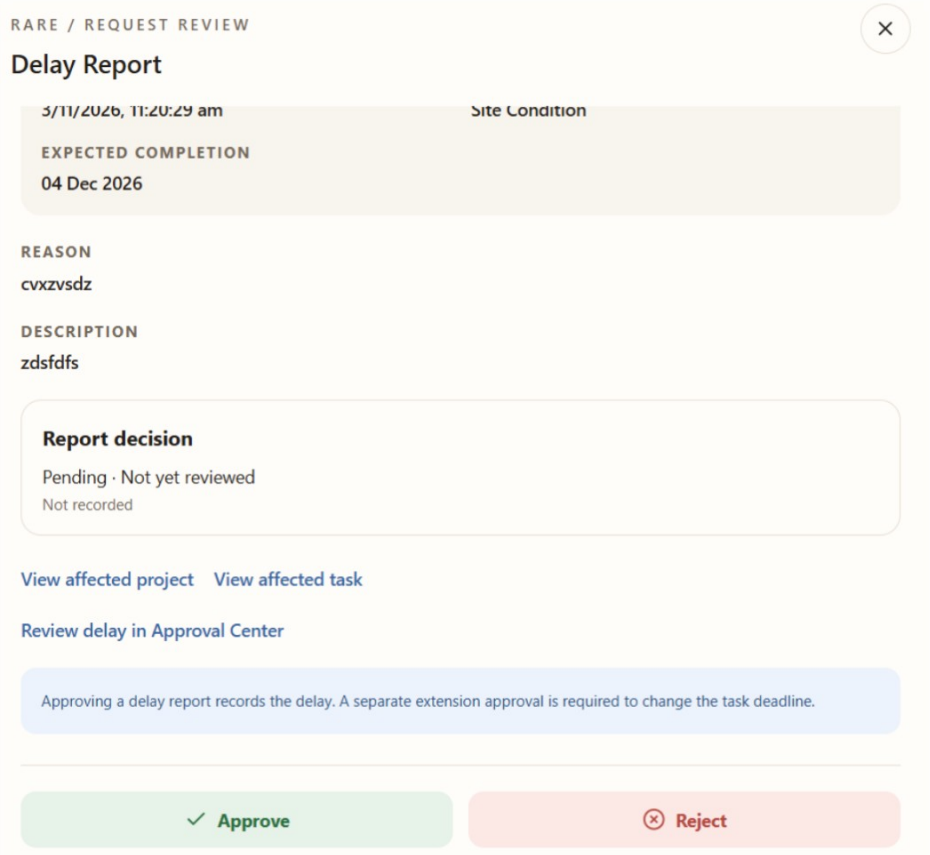

-when the time of approval the feature of adding comment doesnt showing in the portal of supervisor [the comments at the time of approval from admin]

- task cancel option {if the new task cancelled maybe because of fund issue there should be cancellation option to cancell the task }

-there is no option of approval of delay task and the message is showing and also sometime the expected date is not accurate.

-here you can see review delay in approval center but iam already in but there is no need of that function that doesnt work also

- there is no need of message of {Approving a delay report records the delay. A separate extension approval is required to change the task deadline.}in the notification after approved the task extension

- in daily reports in manpower when selecting there should be option of enter manually '

- in daily reports instead of tabs using form kind of method is less confusing and easy to understand,because of daily updating instead tabs maybe form is better

- as we discuss in meeting there is no showing of the

progress bar above or in the project

- when clicking the task in my tasks ,after clicking the view task still showing evrey task and we need to scroll down to find the task

- In my task there should be filter to get clarity on ongoing task and completed and rejected its totally complete confusing cant undrestaand what task is moving
 -- there is task a of project that was cancelled
-- showing tasks that completed
-- and hard to understand what the above filter use
-- the filter doesnt work if the spelling 'putty' instead of putti

Suggestions:
- no need of hover if that is not if a button
- if add task option can be function same as view , maybe this can be easy to add task , because if the supervisor need to add task he had to go from projects -> working project -> scroll down to project task -> create task .
so if the button is same position as view project this big path can be short

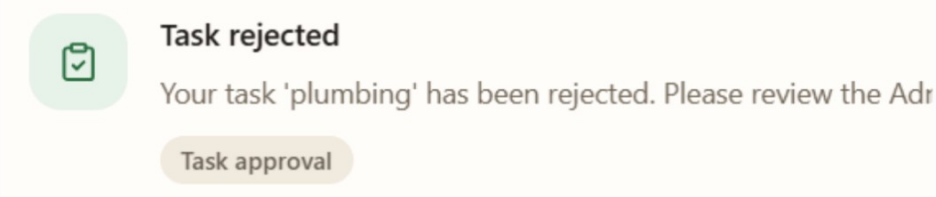

-if the the message in report task delay above the expected completion date it will be more helpful to understand. {Current approved deadline: 05 Dec 2026 / A deadline extension is already pending.}

-same like calling supervisor if there is an option to call a client is better to get

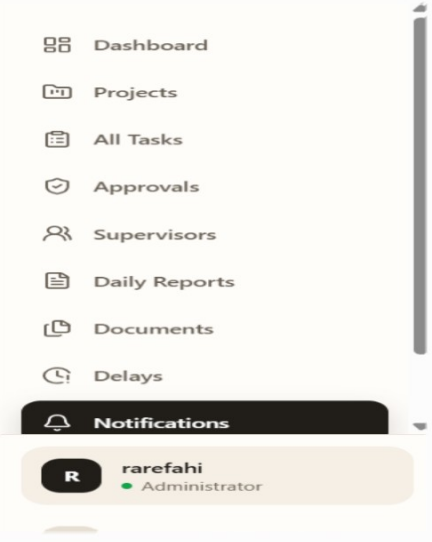

- same like the number to call available supervisor maybe better

-the filter in delay has change to new /old to approved pending rejected

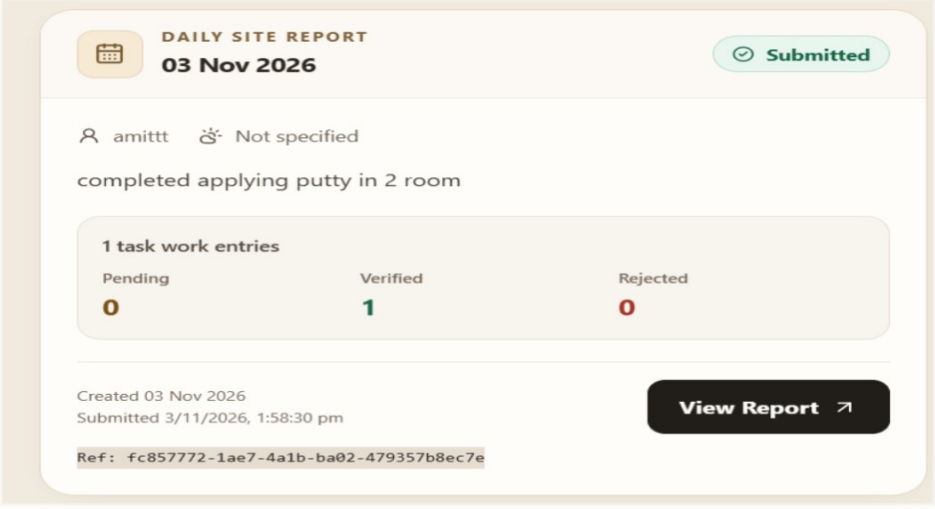

- if task rejected notification color has to be red

-if there any unread or some notification -here showing is more comfortable

-Projects/Book Stall/Daily Reports

there is unwanted text showing

- When reporting daily report i can submit the report without an evidence like photo or manpower because it was important to an admin what really happened ,
need to make those 2 thing required
